AIR COOLER + AIR PURIFIER

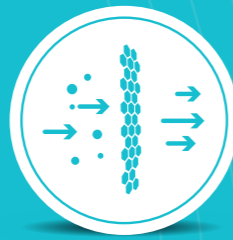

BACTERIA FILTER

This is an antibacterial filter made of carbon fabric. It is treated with special anti-microbial chemicals that arrest and destroy the harmful bacteria and micro-organisms.

ALLERGY FILTER

This allergy filter attracts and reacts with various allergy inducing agents – allergens, and deactivates them.

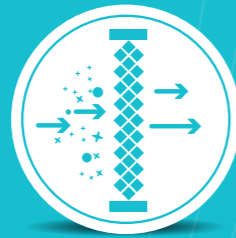

SMELL FILTER

Smell filter effectively adsorbs odours, smoke, chemicals, fumes and volatile organic compounds from indoor air, including life-threatening chemicals like carcinogenic elements.

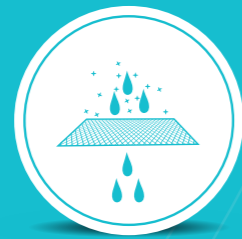

PM2.5 WASH FILTER

Particulate matter is a life threatening pollutant that emerge from automobile combustion, emissions and industrial process. This filter disarms PM in the incoming air and makes the air pure.

DUST FILTER

A filter that makes the air healthy by eliminating micro-particles such as pollen, dead skins, dust mites, pet dander, mold spores, etc.

WATER FILTER

Water filter collects the impurities present in the water that circulates through the system. This filter keeps the water absolutely clean, ensuring effective washing and filtration of air.

Note: The number of filters in i-PURE may vary according to the model of the cooler.
